

Dear FCC: This is in reference to Docket 04-37. It is our opinion that to allow BPL will be a continual interference to any type of hf communications. In our present location (Johnson county Indiana), we are in an area served by 3 power companies. All of who would be canidates for BPL. Without BPL we have an on going battle regarding interference from shorted insulators with these companies. The problem is eventaully fixed, but two of the compamies give that "repair" a very low priority. During these periods hf communications are nil. BPL, from all we have learned would allow the same problem but on a 24/7 schedule. Our primary amatuer radio service is tied to phone patching for DoD aircrews, in USAF MARS. The mix of moral vs official type patches will most times be in favor of the offical type patch. It is our opinion that if BPL is approved our capability to provide phone patch service in MARS to the DoD aircraft and other stations, would be impossible. When considering the BPL plan, please give these remarks consideration. Thank you.
